

ABSTRACT OF THE DISCLOSURE

Emergency Response System

1 An emergency request system includes a portable emergency device
2 designed to be carried on the person of a user, the emergency device
3 containing stored data useful in the event of an emergency, such as data on
4 medical problems of the user, contact information of a person able to supply
5 information when the user is incapacitated and location information as to
6 the present location of the user. The emergency request system includes a
7 cellular phone that supports Bluetooth and software that interacts with the
8 portable emergency device and the 911 emergency system.
